### WORK EXPERIENCE

#### Manual QA Tester

##### Beilox

*December 2023 - March 2024*

In the present I'm part of a manual QA team responsible for the testing of the main product; my daily tasks are functional testing of frontend and backend using the chrome console to have the complete information and make effective reports.

- Tools: Postman, Jira, Qase and PgAdmin.
- SCRUM methodology. Two weeks sprints.

#### Manual QA Tester

##### Litebox

*October 2022 - July 2023*

Responsible of performing manual testing in three different projects: my main tasks were white-box functional testing of both backend and frontend environment. Integration, end-to-end, acceptance and regression testing stood out. I was also responsible for writing the user stories. The client required to pay special attention and focus on the design.

- Tools: ClickUp, Figma, Postman, Browserstack and MySQL.
- SCRUM methodology. Two weeks sprints.

#### Manual QA Tester

##### Agree

*July 2022 - October 2022*

Responsible of performing QA of the company's core product. A web app whose main function was the management of bank loans for agricultural businesses.

The tests in this project were black-box functional testing, among which unit, integration, end-to-end and regression testing stood out.

- Tools: ClickUp, Figma, Postman, Browserstack and MySQL.
- SCRUM methodology. Two weeks sprints.

#### Manual QA Tester

##### Nubi

*February 2021 - April 2022*

During my first experience as QA I was part of a team of three testers on the company's core product, a financial mobile app that works on iOS and Android, whose functions include payments and the request for a prepaid card.

In this project we worked with white-box functional testing such as unit, integration, end to end, acceptance and regression testing.

Among my tasks was also writing test cases with Gherkin language in Test Rail.

- Tools: Postman, Testrail and Jira.
- SCRUM methodology. Two weeks sprints.

#### Python Developer

##### Nubi

*February 2020 - February 2021*

During my experience as a Python developer I was part of a project in which a product was created that allowed transfers from anywhere in the world with Paypal as a partner. In this project, we worked with micro-services for different tasks such as money distribution, account management, validations, creation of operations, among others.

- Tools: Docker, FastAPI, Postman and Jira.
- SCRUM methodology. Two weeks sprints.
